

Pro Door UK Ltd Aluminium insulated garage doors

Today, ensuring garages are secure is a very high priority. Not only are vehicles stored in garages, but also many other expensive items such as garden tools and equipment, power tools and garden furniture.

SECURITY

The **Pro Door** aluminium insulated garage door range provides high security with easy operation.

The door is made from double wall insulated aluminium a full 19mm thick. Far stronger than most standard garages.

To ensure trouble free operation, the curtain is securely assembled with nylon bearing end locks

A heavy duty extruded aluminium bottom rail is fitted which incorporates a very substantial neoprene weather seal

Pro Door garage doors are fitted with the most effective "Auto-locking" system to resist forced entry

A manual operator is supplied for use in the event of a power failure

STYLISH

A range of colours to enhance your property

White	Red RAL 3004
Dark brown	Green RAL 6009
Beige	Black
Grey	Blue RAL 5009
Teak effect	Yellow RAL 1033

Bottom rails, guides and roller boxes are normally supplied in white, brown grey and beige. Alternatively, these can be powder coated in any standard RAL colour (at additional cost).

TROUBLE FREE

The surface of the door profiles consist of a high build stove enamel coating which is weather proof and abrasion and UV resistant

Shutter boxes, side guides and bottom rails are all powder coated aluminium. This very hard finish retains its colour and resists abrasion and knocks.

**ALUMINIUM GARAGE ROLLER DOORS
THE BEST DECISION FOR THE
BEST DOOR**

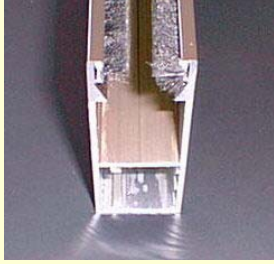

**OUTSTANDING APPEARANCE
HIGHEST QUALITY
LOWEST MAINTENANCE**

QUIET AND DRAUGHT FREE

Substantial 95mm x 34mm guides manufactured from extruded aluminium have nylon brush seals incorporating polythene central membranes. This ensures quiet operation and a very good draught seal

The door has plastic bearings to minimise wear and noise.

REMOTE CONTROL

All **Pro Door** electric garage doors come complete with remote control. Two key fob transmitters are supplied

SAFETY

Every door is fitted with a photo cell detector to stop the door operation if there is an obstruction

Unlike many of our competitors, all Pro Door garage doors are supplied with a full safety roller box

OPTIONS

Backup systems in the case of power failures

Lighting (illuminates when door is operated)

Additional transmitters - these can be supplied to operate more than one door (or even gates) from one transmitter

Key and key pad entry systems and internal switches

Vision and ventilation panels

Doors for applications with limited headroom

High security steel doors
