

Pro Door UK Ltd shutters for bars & serveries

A full range of roller shutters to suit all bars and serveries - public houses, golf clubs, social clubs, hotels and canteens.

EXTRUDED PUNCHED ALUMINIUM

The shutter curtain is manufactured from our 35mm single wall extruded aluminium which is punched with 75mm x 20mm profiled apertures creating a very attractive barrier for bars and serveries. The front face of the lath profile is ribbed to enhance the appearance. Normally these are supplied in a gold or natural anodised finish but can be supplied powder coated to all standard colours. These shutters are available up to 2.5 metres wide.

A particular advantage of this shutter is that the shutter box is very small, only 150mm for shutters up to 1900mm overall height.

This shutter offers significant cost advantages over the traditional aluminium and plastic grille systems.

ALUMINIUM GRILLES

These roller shutters are manufactured from aluminium tubes and links and offers an attractive secure solution for large shutters where total visibility is required. All the components can be powder coated to any standard RAL or BS colour or can be anodised to any standard finish.

PLASTIC GRILLES

These roller shutters are manufactured from plastic links mounted on aluminium bar and offer a decorative alternative to the aluminium grille. Standard link colours are white, brown, black, red, silver and gold. The bottom rail and side guides can be powder coated in any standard RAL or BS colour.

SOLID ROLLER SHUTTERS

A very cost effective solution for securing bars and serveries when not in use. Solid roller shutters are available in a range of standard colours:

Foam filled aluminium shutter curtains

White, cream (RAL 1015), beige, brown, grey, wood (effect), green (RAL 6005), red (RAL 3004), bronze and silver. The curtains can be supplied with or without ventilation slots.

Extruded aluminium shutter curtains

These can be powder coated to any standard RAL or BS colour to match corporate or decorative needs. Anodised finishes are also available.

OPERATION

Spring balanced

Simple "pull down", "push up" operation with a central lock in the bottom rail.

Electric

Electric motor operation provides effortless operation. An emergency manual operation is normally supplied so the shutter can be operated in the event of power failure. Control systems are available to operate more than one shutter simultaneously.

Side guides, bottom rails and shutter boxes are normally supplied in white or brown, but can be powder coated to any standard RAL or BS colour. Bottom rails and side guides can also be supplied in anodised finishes

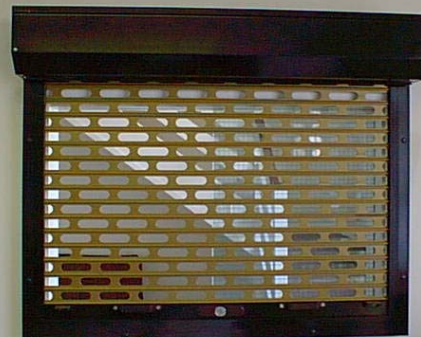

SHUTTER BOXES

All shutters are supplied with full shutter boxes manufactured from powder coated aluminium. These can be left visible as shown on the solid shutter above, or, more normally, clad with decorative facing. The fully assembled box also makes installation very easy.

REMOVABLE MULLIONS

All shutters can be supplied with removable mullions where a totally clear opening is required when the bar or serveries is open. Removable mullions can be manufactured to accommodate any angle. Removable mullions are normally supplied with drop bolts to locate into the counter top. Dust caps are fitted into the counter

SECURITY WITH VISIBILITY

A SECURE CLOSURE - TOTALLY MAINTENANCE FREE
